1 INTRODUCTION

1.1 PURPOSE

This document defines the test scenarios which are applicable to traders from both Release 2 and Release 3 ICS2 scope. Each trader performs the test scenarios relevant to its business model before connecting to ICS2 or if once connected has the necessity to re-execute the EO self-conformance due to its systems updates, redeployment, etc. The test scenarios applicable to ICS2 R2 are available also after R3 go-live as ICS2 scope is cumulative and there can be new traders from ICS2 R2 business scope connecting later on or already existing ones re-executing their campaign or extending the scope of their operations with new ENS filing types.

During Conformance Testing on the side of Economic Operators, it is verified that an EO System can connect to ICS2 without disturbing the correct functionality of the system. In particular, conformity against common functional system specifications is tested, as well as connectivity is tested in order to validate that there is no issue with communication between an EO System and ICS2.

1.2 SCOPE

According to ICS2 Master Test Plan [**R01**], during Economic Operator Conformance Testing, the implementation of S2S interfaces between ICS2 (in particular STI) and EO Systems is tested. This includes:

- Connectivity Testing:
 - Compliance with AS4 interface profile, as defined in ICS2 ICD [**R02**];
 - Proper use of Digital Certificates registered in UUM&DS and included encoded in messages.
- Functional Testing:
 - Semantic validation of ICS2 messages delivered by Trader;
 - Testing of STI notifications dispatched towards Traders;
 - Trader Responses to ICS2 requests coming from STI.

The ICS2 (STI) provides the interface to support information exchanges between the traders and the Customs Authorities in the scope of ICS2 system. In the case of the System-to-system interaction as described in the current document, the EO system fulfils requirements to lodge full or partial ENS filings, respond to requests for missing or additional information from National Customs Authorities and receive notifications that they have requested or that are required to be provided in response to their submitted ENS filings.

1.3 TARGET AUDIENCE

This document is addressed to parties who will participate in ICS2 Economic Operator Conformance Testing :

- DG TAXUD Project team;
- DG TAXUD Development contractors;
- ITSM3 TES;
- ITSM3 OPS;
- QA5;
- Traders and Traders staff;
- Member States Helpdesk staff supporting EO conformance campaigns.

1.4 STRUCTURE

The present document contains the following chapters:

- **Chapter 1 - Introduction:** describes the scope and objectives of the document;
- **Chapter 2 - Test Scenarios Coverage:** explains the connection between test scenarios and system specifications;
- **Chapter 3 - Approach Refinements:** provides additional information on the test approach;
- **Chapter 4 - Test Scenarios:** provides information on the test scenarios;
- **Chapter 5 - Business Scenarios:** provides information on the business scenarios.

1.8 DEFINITIONS

General ICS2 definitions are available in [R05]. Additional definitions can be found below.

Term	Definition
Access Right or Permission	An operation or action allowed to an actor.
Actor	An actor is defined as an organizational entity who is capable of performing behaviour. Examples of actors are humans, departments, and business units. An actor (e.g. Responsible Member State, Involved Member State, EC) performs the behaviour assigned to (one or more) business roles.
Person Filing	Person filing means any person that submits to the customs authority ENS filing in its complete or partial content and other notifications in the

Term	Definition
	prescribed form and manner. This person can be any person that issues bill of lading or air waybill in any form and can be either carrier, NVOCC, freight forwarder, or any person identified by the legal provisions obliged to submit required particulars of ENS to the customs and can include postal operator, consignee stipulated in the lowest bill of lading. Person filing also includes representative of any of the persons mentioned above that submits the ENS Filing in its complete or partial content to the customs authority on behalf of the person that it is representing. <i>Source: ICS2-CFSS-Definitions [R05].</i>
Carrier	Carrier means in the context of entry, the person who brings the goods, or who assumes responsibility for the carriage of the goods, into the customs territory of the Union. However, (i) in the case of combined transportation, "carrier" means the person who operates the means of transport which, once brought into the customs territory of the Union, moves by itself as an active means of transport; (ii) in the case of maritime or air traffic under a vessel- sharing or contracting arrangement, "carrier" means the person who concludes a contract and issues a bill of lading or air waybill for the actual carriage of the goods into the customs territory of the Union. <i>Source: ICS2-CFSS-Definitions [R05].</i>
Role	A role is defined as the responsibility for performing specific behaviour, to which an actor can be assigned.
Test Case	A test case is a set of steps applied to transit the system from a known initial state to an expected final state. It is characterised by: • An identifier that uniquely identifies the test case; • A short description of its purpose; • One or several actors performing the actions on the system; • A set of pre-requisites describing the initial state of the system; • A set of steps defining the actions performed by the actors and their expected results. Steps may describe input values and expected output values if applicable for the tested feature; • A set of post-conditions describing the state in which the system is expected to be after the execution of the steps; • A set of pass criteria defining the conditions under which the test can be considered as passed; A test scenario is realised by one or several test cases without an explicit mapping between the test cases and the test scenario guidelines
Test Scenario	A test scenario is a set of guidelines enabling to assess the testing coverage of a feature against its specifications. It is characterised by: • An identifier that uniquely identifies the test scenario; • A description of the covered feature. A set of guidelines (e.g. a high-level action performed on an abstract set of data) that can be ordered if the tested feature requires it.

Table 4: Definitions

2 TEST SCENARIOS COVERAGE

Functional Test Scenarios cover the interactions between the Trader role and STI, as defined in business specifications BPM-L4 [R04]. The Trader role could be a Person filing (in business meaning could be Carrier, Representative, House filer), Carrier (if different from the Person filing), a Notify party and a Person notifying the arrival.

The traceability matrix between business processes and test scenarios is listed below:

<i>ICS2-CTS-EO-25</i>	X	X	X	X				

Table 6: Traceability matrix between trader's role and test scenarios.

3 APPROACH REFINEMENTS

The approach to verify the conformance of the EO systems will be based on test scenarios and business scenarios. Those will be triggered from the ICS2 STI STP conformance campaign screen(s), dedicated solely for the purpose of an EO user to configure and execute the conformance test campaigns.

Each *Test scenario* (section 3.1) defined in this document aims at covering a simple two-way message exchange between the EO systems and ICS2. A pre-defined *Business scenario* (section 3.2) combines a number of steps to cover a specific functionality of the system.

The role that the trader system plays in the interaction with ICS2 will define which business scenarios must be executed to pass conformance. The different roles are:

- 1) Postal Operators;
- 2) Express Operators;
- 3) Notify Party;
- 4) Person Notifying the arrival;
- 5) Carriers;
- 6) House Filers.

The first step in the ICS2 STI STP self-conformance test configuration screen is for an EO user to provide the configuration field Sender Party ID. The second step is to register a new Test Campaign.

When registering a new Test Campaign, the EO must select its role. Depending on this selection, a pre-defined set of business scenarios will be proposed to be executed.

Alternatively, for Carriers and House Filers, a list with the ENS Filings available for conformance will be displayed. The next step for them will be to select which types of filings are applicable to them and a set of business scenarios corresponding to those ENS Filings will be proposed to be executed.

To finish the configuration, the EO must provide an identification number for the list of messages requiring filling an identifier for the selected Business role and scenario.

Most of the tests of the EO Business Scenarios are triggered by the EO with a successful Registration of an ENS Filing and reception of the MRN, via the IE3R01 message. However, there are some exceptions for which the initial ENS Registration to start the flow must be mocked. For these scenarios, *launch test* action will be available in the Test Campaign Business Scenario screen.

The scenarios where the EO has a passive role and will only receive messages are the following ones:

- “Notify party” Business Scenario;
- “House Filer” F14 ENS Pending notification Business Scenario;
- “House Filer” F15 ENS Pending notification Business Scenario;
- “House Filer” F16 ENS Pending notification Business Scenario;
- “House Filer” F17 ENS Pending notification Business Scenario;
- “House Filer” F22 ENS Pending notification Business Scenario;
- “House Filer” F26 ENS Pending notification Business Scenario.

For the “Person notifying the Arrival” Business Scenario, the initial ENS Registration must be mocked as well and, additionally, the MRN generated by this registration will be communicated to EO, displayed as identifier of the message in the Message Flow screen, so it can be used by the EO to submit the Arrival Notification.

3.1 TEST SCENARIOS

The test scenarios defined in the context of this document will be used in order to prove the conformity of trader systems with the related specifications. Specifically, the scenarios cover the ability of a trader system to exchange messages with ICS2 as specified in ICS2 BPM L4 Process

Description [R04] and the ICS2 interface control document [R02]. The focus of the scenarios is on the ability of trader systems to send and receive the specified messages and not on the manual or automated processing of data. Nonetheless, background information of what trader systems are performing before or after the exchange of a message is included in order to improve the readability of the scenarios.

At the time of EO conformance testing, Validation BAS is considered as a tested service; this means that any semantical error would fulfil conformance testing needs. Functional test scenarios ICS2-CTS-EO-4 and ICS2-CTS-EO-7 described below in section 4.1, are included for information reasons since they are not part of the business scenarios but can occur during the testing.

It is important to note that Traders will use their actual systems during EO conformance testing. Therefore, non-existing Member States, not-existing goods codes or other non-existing data must be avoided, as this will complicate testing on their behalf. Thus, whilst conformance testing, no syntactical errors will be tested.

For each test scenario the following information is provided:

1. **Test scenario ID:** The unique ID assigned to the test scenario;
2. **Sequence Diagram:** A diagram depicting the message exchange between trader system and ICS2;
3. **Test Category:** Functional for the Conformance Scenarios that cover functional specifications and Technical for any other type of scenarios;
4. **Optionality:** The optionality of the messages in the scenarios indicates if the message is M (mandatory) or O (Optional);
5. **Test Purpose:** The functionality that needs to be verified during the Conformance Testing;
- 7) **Trader role:** The role that the trader system plays in each scenario:
 - a. Postal Operators;
 - b. Express Operators;
 - c. Notify Party;
 - d. Person Notifying the arrival;
 - e. Carriers;
 - f. House Filers;
6. **Input:** The trigger messages received from a trader system or ICS2 that initiate the execution of each scenario;
7. **Prerequisites:** Any pre-conditions that need to be fulfilled prior to the execution of each scenario;
8. **Scenario Description:** Description of the messages exchanged, and a high-level description of the procedure executed after a message receipt;
9. **Scenario Expected Results:** The expected outcome/state after the execution of the steps detailed in the Scenario Description section;
10. **Integration needs:** The external systems that shall be available for the scenario to be executed.

3.2 BUSINESS SCENARIOS

In addition to the test scenarios, business scenarios (a pre-defined sequence of test scenarios) will be used for the validation of the system. Each of these business scenarios, documented in Section 4.2.12, covers a specific functionality of the system.

For Postal Operators, Express Operators and Notify parties, the following information is provided for each business scenario:

1. **Business scenario title:** The title of the business scenario that includes the business case, the combination of filing types used and any characteristics of the scenario that it covers;
2. **Summary:** A summary of the business scenario with the roles, messages and the main business logic that each business scenario covers;

3. **Attachment:** The flow of messages exchanged between the different systems, the business logic and rules that they cover;
4. **Flows – EO-CTS mapping:** The flow of messages between ICS2 and the trader systems and the mapping with the corresponding EO-CTS.

For Carriers and House filers, as not all types of filings are applicable for each, a list of business cases applicable per ENS filing to test the complete functionality is described; and for each ENS filing, there is an attachment with all the pertinent business scenarios, describing the flow of messages exchanged between the different systems.

3.3 IT SERVICE PROVIDER

An IT service provider will support the business of many economic operators. To be able to support them, the ITSP must register a test campaign for each business role he will perform, and for the ENS filing types planned to be submitted if the selected business role is Carrier or House filer; and run the campaign accordingly and successfully.

4 TEST SCENARIOS

4.1 Connectivity Test Scenarios

4.1.1 ICS2-CTS-EO-1: AS4 Message Connectivity

AS4 Message Connectivity	
ID	ICS2-CTS-EO-1
Sequence Diagram	N/A
Test Category	Connectivity
Optionality	M
Test Purpose	Verify successful connectivity between TAPAS and EO System AS4 Access Points in both directions.
Trader Role	Postal Operator, Express Operator, Carrier, House filer, Notify Party, Person notifying the arrival.
Input	- AS4 message conforming to ICS2 ICD [R02] with the following test specific values: - eb:Action: http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/test - eb:Service: http://docs.oasis-open.org/ebxml-msg/ebms/v3.0/ns/core/200704/service - Empty message payload.
Prerequisites	- EO System is an eDelivery conformant access point [R06]; - EO System is properly registered in UUM&DS; - EO System is properly configured with the AS4 PModes as defined in ICS2 ICD [R02].
Scenario Description	1. EO System sends a test message to TAPAS. The TAPAS system verifies the digital signature using UUM&DS and automatically replies with an AS4 signal message allowing the EO system to verify the correct connection;
Scenario Expected Results	Connectivity test request message is received by TAPAS;
Integration Needs	- UUM&DS; - TAPAS.

Table 7: Description of test scenario **ICS2-CTS-EO-1**

4.2 Functional Test Scenarios

All “XX” references in IE3FXX or IE3AXX messages³ in the following test scenarios include all applicable ENS filing types for ICS2. The types of ENS Filings are as described below:

F10	Entry summary declaration – Sea and inland waterways – Complete dataset – Straight bill of lading containing the necessary information from consignee
F11	Entry summary declaration – Sea and inland waterways – Complete dataset – Master bill of lading with underlying house bill(s) of lading containing the necessary information from consignee at the level of the lowest house bill of lading
F12	Entry summary declaration – Sea and inland waterways – Partial dataset – Master bill of lading only
F13	Entry summary declaration – Sea and inland waterways – Partial dataset – Straight bill of lading only
F14	Entry summary declaration – Sea and inland waterways – Partial dataset – House bill of lading only
F15	Entry summary declaration – Sea and inland waterways – Partial dataset – House bill of lading with the necessary information from consignee
F16	Entry summary declaration – Sea and inland waterways – Partial dataset – Necessary information required to be provided by consignee at the lowest level of transport contract (Lowest house bill of lading where the master bill of lading is no straight bill of lading)
F20	Entry summary declaration – Air cargo (general) – Complete dataset lodged pre-loading
F21	Entry summary declaration – Air cargo (general) – Partial dataset – Master air waybill lodged pre-arrival
F22	Entry summary declaration – Air cargo (general) – Partial dataset – House air waybill lodged pre-arrival — Partial dataset provided by a person pursuant to Article 127(6) of the Code and in accordance with Article 113(1)
F23	Entry summary declaration – Air cargo (general) — Partial dataset — Minimum dataset lodged pre-loading in accordance with Article 106(1) second subparagraph without master air waybill reference number
F24	Entry summary declaration – Air cargo (general) — Partial dataset — Minimum dataset lodged pre-loading in accordance with Article 106(1) second subparagraph with master air waybill reference number
F25	Entry summary declaration – Air cargo (general) — Partial dataset — Master air waybill reference number lodged pre-loading in accordance with Article 106(1) second subparagraph
F26	Entry summary declaration – Air cargo (general) — Partial dataset — Minimum dataset lodged pre-loading in accordance with Article 106(1) second subparagraph and containing additional house air waybill information
F27	Entry summary declaration – Air cargo (general) — Complete dataset lodged pre-arrival
F28	Entry summary declaration – Air cargo (general) — Complete dataset lodged pre-loading – Direct air waybill
F29	Entry summary declaration – Air cargo (general) — Complete dataset lodged pre-arrival – Direct air waybill

³ Please note that test messages depend on the Mode of transport of each Economic Operator. For example, a Postal Operator will only send F43 and F44 message types, while an Express Integrator will not send those message types, but only IE3F30, IE3F32. An Air Carrier will send F42 message types.

F30	Entry summary declaration – Express consignments — Complete dataset lodged pre-arrival
F31	Entry summary declaration – Express consignments on Air cargo (general) – Complete dataset lodged pre-arrival by the express carrier
F32	Entry summary declaration — Express consignments — Minimum dataset to be lodged pre-loading in relation with situations defined in Article 106(1) second subparagraph
F33	Entry summary declaration – Express consignments on air cargo general – Partial dataset – House air waybill lodged pre-arrival by a person pursuant to Article 127(6) of the Code and in accordance with Article 113(1)
F34	Express consignments on road – Complete dataset lodged pre-arrival
F40	Entry summary declaration – Postal consignments – Partial dataset – Road master transport document information
F41	Entry summary declaration – Postal consignments – Partial dataset – Rail master transport document information
F42	Entry summary declaration – Postal consignments – Partial dataset - Master air waybill containing necessary postal air waybill information lodged in accordance with the time-limits applicable for the mode of transport concerned
F43	Entry summary declaration – Postal consignments — Partial dataset — Minimum dataset lodged pre- loading in accordance with Article 106(1) second subparagraph and in accordance with Article 113(2)
F44	Entry summary declaration – Postal consignments — Partial dataset — Receptacle identification number lodged pre-loading in accordance with Article 106(1) second subparagraph and in accordance with Article 113(2)
F45	Entry summary declaration – Postal consignments – Partial dataset – Master bill of lading only
F50	Entry summary declaration – Road mode of transport
F51	Entry summary declaration – Rail mode of transport

Table 8: The types of ENS Filings

4.2.1 ICS2-CTS-EO-2: Register ENS Filing

Register ENS Filing (Successful Registration)	
ID	ICS2-CTS-EO-2
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3FXX(ENS Filing) ICS2-->>EO System: IE3R01(ENS Registration Response) </pre>
Test Category	Functional
Test Purpose	Verify successful registration of IE3FXX ENS Filing and creation of MRN which is returned to EO System.

Register ENS Filing (Successful Registration)	
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	Valid IE3FXX ENS Filing with valid data.
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed.
Scenario Description	- EO System sends an ENS Filing (IE3FXX) to STI; - Verify that ENS Registration Response (IE3R01) is successfully received by the EO System for IE3FXX ENS Filing of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3R01 ENS registration response, and the MRN assigned to it, is successfully received by the EO System; - The EO System acknowledged the reception of the registration response by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS.

Table 9: Description of test scenario **ICS2-CTS-EO-2**

4.2.2 ICS2-CTS-EO-3: Register ENS Filing (Semantical Validation Not Successful)

This test scenario is not part of the business scenarios, but it is included to be considered in case there are errors generated during the execution of the business scenarios. In case of errors, the ENS filings will be rejected.

Register ENS Filing (Semantical Validation Not Successful)	
ID	ICS2-CTS-EO-3
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 Note over EO System,ICS2: IE3FXX(ENS Filing with semantical error) EO System->>ICS2: IE3FXX(ENS Filing with semantical error) Note over ICS2: ICS2-->>EO System: IE3N99(Notify error in ENS Filing) </pre>
Test Category	Functional
Test Purpose	Verify that one semantical error in IE3FXX ENS Filing returns IE3N99 Error Notification to EO System.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	One IE3FXX ENS Filing with invalid data, which is expected to fail semantical validation.

Register ENS Filing (Semantical Validation Not Successful)	
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed.
Scenario Description	- EO System sends an ENS Filing (IE3FXX) with one semantical error to ICS2 system; - Verify that Error Notification (IE3N99) is received by the EO System for IE3FXX ENS Filing of step 1.
Scenario Expected Results	- IE3N99 error notification is successfully received by the EO system; - Error described in IE3N99 message is indeed the expected error according to input IE3FXX message; - The EO System acknowledged the reception of the Error Notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 10: Description of test scenario **ICS2-CTS-EO-3**

4.2.3 ICS2-CTS-EO-4: Register ENS Filing (ENS Lifecycle Validation Error)

This test scenario is not part of the business scenarios, but it is included to be considered in case there are errors generated during the execution of the business scenarios. In case of errors, the ENS filings will be rejected.

Register ENS Filing (ENS Lifecycle Validation Error)	
ID	ICS2-CTS-EO-4
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3FXX(ENS Filing w/ ENS Lifecycle Validation error) ICS2-->>EO System: IE3N01(Notify ENS Lifecycle Validation Error) </pre>
Test Category	Functional
Test Purpose	Verify that one ENS Lifecycle Validation Error in IE3FXX ENS Filing returns IE3N01 ENS lifecycle validation error notification to EO System.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	One IE3FXX ENS Filing, which is expected to fail ENS Lifecycle Validation.
Prerequisites	EO System is properly registered in UUM&DS;

Register ENS Filing (ENS Lifecycle Validation Error)	
	Connectivity test scenarios of section 4.1 have been successfully completed.
Scenario Description	- EO System sends an ENS Filing (IE3FXX) which is expected to fail ENS Lifecycle Validation; - Verify that ENS Lifecycle Validation Error (IE3N01) is received by the EO System for IE3FXX ENS Filing of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3N01 ENS lifecycle validation error notification is successfully received by the EO System; - Error described in IE3N01 message is indeed the expected error according to input IE3FXX message; - The EO System acknowledged the reception of the ENS Lifecycle Validation Error by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 11: Description of test scenario **ICS2-CTS-EO-4**

4.2.4 ICS2-CTS-EO-5: Amend ENS Filing

Amend ENS Filing (Successful Amendment)	
ID	ICS2-CTS-EO-5
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3AXX(ENS Filing Amendment) ICS2-->>EO System: IE3N10(Accept ENS Amendment) </pre>
Test Category	Functional
Test Purpose	Verify acceptance of IE3AXX ENS Filing amendment by ICS2 system.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	Valid IE3AXX ENS Filing amendment with valid data.
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed;

Amend ENS Filing (Successful Amendment)	
	Previous successful registration of IE3FXX ENS Filing, according to test scenario ICS2-CTS-EO-2.
Scenario Description	- EO System sends an ENS Filing amendment (IE3AXX) to ICS2 system; - Verify that Accept ENS amendment response (IE3N10) is received by the EO System for IE3AXX ENS Filing amendment of step 1.
Scenario Expected Results	- IE3N10 Accept ENS amendment response is successfully received by the EO System, and that EO System confirms the reception of the response; - The EO System acknowledged the reception of the Accept ENS amendment response by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 12: Description of test scenario **ICS2-CTS-EO-5**

4.2.5 ICS2-CTS-EO-6: Amend ENS Filing (Semantical Validation Not Successful)

This test scenario is not part of the business scenarios, but it is included to be considered in case there are errors generated during the execution of the business scenarios. In case of errors, the ENS filings will be rejected.

Amend ENS Filing (Semantical Validation Not Successful)	
ID	ICS2-CTS-EO-6
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3AXX(ENS Filing amendment with semantical error) ICS2-->>EO System: IE3N99(Notify error in ENS Filing amendment) </pre>
Test Category	Functional
Test Purpose	Verify that one semantical error in IE3AXX ENS Filing amendment returns IE3N99 Error Notification to EO System.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	One IE3AXX ENS Filing amendment with invalid data, which is expected to fail semantical validation.
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed;

Amend ENS Filing (Semantical Validation Not Successful)	
	Previous successful registration of IE3FXX ENS Filing, according to test scenario ICS2-CTS-EO-2.
Scenario Description	- EO System sends an ENS Filing amendment (IE3AXX) with one semantical error to ICS2 system; - Verify that Error Notification (IE3N99) is received by the EO System for IE3AXX ENS Filing amendment of step 1, and that EO System confirms the reception of the response; - The EO System acknowledged the reception of the Error Notification by a correctly signed AS4 receipt message.
Scenario Expected Results	- IE3N99 error notification is successfully received by the EO System; - Error described in IE3N99 message is indeed the expected error according to input IE3AXX message.
Integration Needs	- UUM&DS; - TAPAS

Table 13: Description of test scenario **ICS2-CTS-EO-6**

4.2.6 ICS2-CTS-EO-7: Amend ENS Filing (ENS Lifecycle Validation Error)

This test scenario is not part of the business scenarios, but it is included to be considered in case there are errors generated during the execution of the business scenarios. In case of errors, the ENS filings will be rejected.

Amend ENS Filing (ENS Lifecycle Validation Error)	
ID	ICS2-CTS-EO-7
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3AXX(ENS Filing amendment w/ ENS Lifecycle Validation error) ICS2-->>EO System: IE3N01(Notify ENS Lifecycle Validation error) </pre>
Test Category	Functional
Test Purpose	Verify that one ENS Lifecycle Validation Error in IE3AXX ENS Filing amendment returns IE3N01 ENS lifecycle validation error notification.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	One IE3AXX ENS Filing amendment, which is expected to fail ENS Lifecycle Validation.
Prerequisites	EO System is properly registered in UUM&DS;

Amend ENS Filing (ENS Lifecycle Validation Error)	
	- Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3FXX ENS Filing, according to test scenario ICS2-CTS-EO-2.
Scenario Description	- EO System sends an ENS Filing amendment (IE3AXX) which is expected to fail ENS Lifecycle Validation to ICS2 system; - Verify that ENS Lifecycle Validation Error Notification (IE3N01) is successfully received by the EO System for IE3AXX ENS Filing amendment of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3N01 ENS lifecycle validation error notification is successfully received by the EO System; - Error described in IE3N01 message is indeed the expected error according to input IE3AXX message; - The EO System acknowledged the reception of the ENS Lifecycle Validation Error Notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 14: Description of test scenario **ICS2-CTS-EO-7**

4.2.7 ICS2-CTS-EO-8: Invalidate ENS Filing

Invalidate ENS Filing	
ID	ICS2-CTS-EO-8
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3Q04(Invalidate ENS) ICS2-->>EO System: IE3R07(Accept ENS invalidation) </pre>
Test Category	Functional
Test Purpose	Verify successful invalidation of IE3FXX ENS Filing.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	MRN of already registered IE3FXX ENS Filing for the particular EO.
Prerequisites	EO System is properly registered in UUM&DS;

Invalidate ENS Filing	
	- Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3FXX ENS Filing, according to test scenario ICS2-CTS-EO-2.
Scenario Description	- EO System sends ENS invalidation request for ENS Filing of known MRN; - Verify that ENS invalidation response (IE3R07) is successfully received by the EO System for ENS invalidation request of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3R07 accept ENS invalidation response is successfully received by the EO System; - The EO System acknowledged the reception of the ENS invalidation response by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 15: Description of test scenario **ICS2-CTS-EO-8**

4.2.8 ICS2-CTS-EO-9: Notify arrival of the means of transport

Register arrival notification (Successful Registration)	
ID	ICS2-CTS-EO-9
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3N06(Arrival notification) ICS2-->>EO System: IE3R04(ENS Registration response) </pre>
Test Category	Functional
Test Purpose	Verify successful registration of valid arrival notification and creation of MRN which is allocated to the arrival notification. The arrival notification obtains the state 'Registered'.
Trader Role	Person notifying the arrival
Input	Valid IE3N06 message with valid data.
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed.

Register arrival notification (Successful Registration)	
Scenario Description	- EO System sends an arrival notification (IE3N06) to ICS2 system; - Verify that arrival registration Response (IE3R04) is successfully received by the EO System for arrival notification of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3R04 ENS registration response, and the MRN assigned to it, is successfully received by the EO System; - The EO System acknowledged the reception of the Arrival registration Response by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 16: Description of test scenario **ICS2-CTS-EO-9**

4.2.9 ICS2-CTS-EO-10: Notify arrival of the means of transport (Semantical Validation Not Successful)

This test scenario is not part of the business scenarios, but it is included to be considered in case there are errors generated during the execution of the business scenarios. In case of errors, the ENS filings will be rejected.

Register arrival notification (Semantical Validation Not Successful)	
ID	ICS2-CTS-EO-10
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 Note over EO System, ICS2: IE3N06(Arrival notification with semantical error) EO System->>ICS2: IE3N06(Arrival notification with semantical error) Note over ICS2: ICS2-->>EO System: IE3N99 (Notify error in arrival notification) </pre>
Test Category	Functional
Test Purpose	Verify that one semantical error in arrival notification (IE3N06) returns IE3N99 Error Notification to EO System.
Trader Role	Person notifying the arrival
Input	One IE3N06 arrival notification with invalid data, which is expected to fail semantical validation.
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed.
Scenario Description	EO System sends an IE3N06 arrival notification with one semantical error to ICS2 system;

Register arrival notification (Semantical Validation Not Successful)	
	2. Verify that Error Notification (IE3N99) is successfully received by the EO System for IE3N06 arrival notification of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3N99 error notification is successfully received by the EO System; - Error described in IE3N99 message is indeed the expected error according to input IE3N06 message; - The EO System acknowledged the reception of the Error Notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 17: Description of test scenario **ICS2-CTS-EO-10**

4.2.10 Receive notifications from STI

4.2.10.1 ICS2-CTS-EO-12: Receive Assessment Complete Notifications from STI

Receipt of Assessment Complete Notification	
ID	ICS2-CTS-EO-12
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 ICS2->>EO System: IE3N03(Assessment Complete Notification) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of Assessment Complete notification.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Person filing has requested to receive 'Assessment complete' notification message IE3N03, by configuring it in the Manage Trader preferences page on ICS2 STI STP conformance test configuration screens; - One of two alternatives below: - EO System has already submitted an ENS Filing (IE3FXX) to ICS2 (according to test scenario ICS2-

Receipt of Assessment Complete Notification	
	CTS-EO-2) which was valid and was assessed successfully; or EO System has already submitted an ENS Filing amendment (IE3AXX) to ICS2 (according to test scenario ICS2-CTS-EO-5) which was valid and was assessed successfully.
Scenario Description	Verify that assessment complete notification (IE3N03) is successfully received by the EO system for MRN corresponding to the MRN of input message (either IE3FXX or IE3AXX), and that EO System confirms the reception of the response.
Scenario Expected Results	- Assessment complete notification (IE3N03) is successfully received by the EO System; - The EO System acknowledged the reception of the Assessment complete notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 18: Description of test scenario **ICS2-CTS-EO-12**

4.2.10.2 ICS2-CTS-EO-13: Receive Do Not Load Request from STI

Receipt of Do Not Load Request	
ID	ICS2-CTS-EO-13
Sequence Diagram	 <pre> sequenceDiagram participant EO System participant ICS2 ICS2-->>EO System: IE3Q01(Do Not Load Request) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of Do Not Load request.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - One of two alternatives below: - EO System has already submitted an ENS Filing (IE3FXX) to ICS2 (according to test scenario ICS2-CTS-EO-2) which ended up in a DNL hit; or

Receipt of Do Not Load Request	
	EO System has already submitted an ENS Filing amendment (IE3AXX) to ICS2 (according to test scenario ICS2-CTS-EO-5) which ended up in a DNL hit.
Scenario Description	1. Verify that IE3Q01 (DNL request) notification is successfully received by the EO System and that EO System confirms the reception of the notification.
Scenario Expected Results	- Do Not Load request (IE3Q01) is successfully received by the EO System; - The EO System acknowledged the reception of the Do Not Load request by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 19: Description of test scenario **ICS2-CTS-EO-13**

4.2.10.3 ICS2-CTS-EO-14: Receive AEO Control Notification from STI

AEO Control Notification	
ID	ICS2-CTS-EO-14
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 ICS2-->>EO System: IE3N09(Notify AEO Control) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of AEO ⁴ control notification.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3FXX ENS Filing, according to test scenario ICS2-CTS-EO-2; - Economic Operator needs to have an AEOF or AEOS authorisation in order to receive this notification.
Scenario Description	1. STI sends an AEO control notification (IE3N09).

⁴ The prerequisite of holding an AEOS is valid in PRODUCTION but in CONFORMANCE it will be bypassed and the testing of the EOS flows with IE3N99 message will receive AEOS, no matter the person filing holds an AEOS or not.

AEO Control Notification	
Scenario Expected Results	- AEO control notification (IE3N09) is successfully received by the EO System, and EO System confirms the reception of the notification; - The EO System acknowledged the reception of the AEO control notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 20: Description of test scenario **ICS2-CTS-EO-14**

4.2.10.4 ICS2-CTS-EO-15: Receive Control Notification from STI

Notify Control	
ID	ICS2-CTS-EO-15
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 ICS2->>EO System: IE3N08(Control notification) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of IE3N08 control notification
Trader Role	Person notifying the arrival and Notify Party.
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3N06 arrival notification, according to test scenario ICS2-CTS-EO-9.
Scenario Description	1. The ICS2 STI sends a Control Notification (IE3N08).
Scenario Expected Results	- Control notification (IE3N08) is successfully received by the EO System, and EO System confirms the reception of the notification; - The EO System acknowledged the reception of the Control notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

4.2.10.5 ICS2-CTS-EO-16: Receive ENS in Incorrect State Notification from STI

ENS In Incorrect State Notification	
ID	ICS2-CTS-EO-16
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 ICS2->>EO System: IE3N07(ENS in incorrect state notification) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of IE3N07 ENS in incorrect state notification.
Trader Role	Person notifying the arrival.
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3N06 arrival notification, according to test scenario ICS2-CTS-EO-9; - The state of an ENS filing is checked upon arrival. The ENS is not in a correct state to announce its arrival and its House consignments cannot obtain the state 'Arrived'.
Scenario Description	1. The ICS2 STI sends an ENS in incorrect State Notification (IE3N07).
Scenario Expected Results	- ENS in incorrect state notification (IE3N07) is successfully received by the EO System, and EO System confirms the reception of the notification; - The EO System acknowledged the reception of the ENS in incorrect state notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

4.2.10.6 ICS2-CTS-EO-17: Receive ENS Not Complete Notification from STI

ENS Not Complete Notification (Relate ENS filings)	
ID	ICS2-CTS-EO-17

ENS Not Complete Notification (Relate ENS filings)	
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 ICS2-->>EO System: IE3N02(ENS not complete notification) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of IE3N02 ENS Not Complete Notification.
Trader Role	Carrier or House filer.
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3F12, IE3F13, IE3F21, IE3F22, IE3F26 ENS Filing or IE3A12, IE3A13, IE3A21, IE3A22, IE3A26 Filing amendment to ICS2, according to test scenario ICS2-CTS-EO-2: Register ENS Filing or according to test scenario ICS2-CTS-EO-5: Amend ENS Filing; - Person filing has requested to receive 'ENS not complete' notification message IE3N02, by configuring it in the Manage Trader preferences page on ICS2 STI STP conformance test configuration screens, or one, or more, of the parties that this person has indicated as obliged to lodge ENS filings, have not yet filed.
Scenario Description	The ICS2 STI will send the ENS Not Complete Notification to the person filing via the message IE3N02. The notification will also include a list of the filers (<i>Supplementary declarant</i>) that this person has indicated as obliged to file and who have not filed yet.
Scenario Expected Results	- The Person filing receives the ENS Not Complete Notification (IE3N02), and EO System confirms the reception of the notification. This notification may be also communicated to the Carrier whenever applicable; - The EO System acknowledged the reception of the ENS Not Complete Notification by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 23: Description of test scenario **ICS2-CTS-EO-17**

4.2.10.7 ICS2-CTS-EO-18: Receive ENS Pending Notification from STI

ENS Pending Notification (Relate ENS filings)	
ID	ICS2-CTS-EO-18
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 ICS2->>EO System: IE3N11(ENS pending notification) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of IE3N11 ENS Pending Notification.
Trader Role	'Person not yet filed'
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3F12, IE3F14, IE3F21, IE3F22, IE3F26 ENS Filing or IE3A12, IE3A14, IE3A21, IE3A22, IE3A26 Filing amendment to ICS2, according to test scenario ICS2-CTS-EO-2 or according to test scenario ICS2-CTS-EO-5; - Successful IE3N02 notification has been sent to the person filing, which includes also a list of the Supplementary declarants that this person has indicated as obliged to file and who have not filed yet; - Person that has not filed yet, is connected to the STI.
Scenario Description	The Person that has not yet filed is informed that he is obliged to file an ENS filing, via the message IE3N11. That is, for each supplementary declarant (<i>IE4N02/Supplementary declarant</i>) contained in the received IE4N02 message, an IE3N11 message will be sent.
Scenario Expected Results	- The Person that has not yet filed receives the ENS Pending Notification with ID IE3N11, and EO System confirms the reception of the notification; - The EO System acknowledged the reception of the ENS Pending Notification, by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS.

Table 24: Description of test scenario ICS2-CTS-EO-18

4.2.10.8 ICS2-CTS-EO-22: Receive Arrival Registration Response from STI

Arrival Registration Response	
ID	ICS2-CTS-EO-22
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 ICS2-->>EO System: IE3R04(Arrival registration response) </pre>
Test Category	Functional
Test Purpose	Verify successful reception of IE3R04 Arrival registration response
Trader Role	Notify Party
Input	N/A
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3N06 arrival notification, according to test scenario ICS2-CTS-EO-9.
Scenario Description	1. The ICS2 STI sends a Arrival registration Response (IE3R04) to the notify party.
Scenario Expected Results	- Arrival registration Response (IE3R04) is successfully received by the EO System, and EO System confirms the reception of the notification; - The EO System acknowledged the reception of the Arrival registration Response, by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Amend ENS Filing after receiving Additional Information Request	
	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3Q02(Request for additional Information) ICS2->>EO System: IE3Axx(ENS filing Amendment) EO System->>ICS2: IE3N10(Accept ENS Amendment) </pre>
Test Category	Functional
Test Purpose	Verify acceptance of IE3AXX ENS Filing amendment by ICS2 system.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	Valid IE3AXX ENS Filing amendment with valid data.
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3FXX ENS Filing, according to test scenario ICS2-CTS-EO-2.
Scenario Description	- NES issues an additional information request (IE3Q02) of type amendment (CL735 value='AMD'); - EO System sends an ENS Filing amendment (IE3AXX) to ICS2 system; - Verify that Accept ENS amendment response (IE3N10) is successfully received by the EO System for IE3AXX ENS Filing amendment of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3N10 Accept ENS amendment response is successfully received by the EO System; - The EO System acknowledged the reception of the Accept ENS amendment response, by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

4.2.12 ICS2-CTS-EO-25: Consult ENS

Consult ENS	
ID	ICS2-CTS-EO-25

Consult ENS	
Sequence Diagram	<pre> sequenceDiagram participant EO System participant ICS2 EO System->>ICS2: IE3Q05(Consult ENS) ICS2-->>EO System: IE3R08(ENS Consultation result) </pre>
Test Category	Functional
Test Purpose	Verify successful consultation of IE3FXX ENS Filing.
Trader Role	Postal Operator, Express Operator, Carrier and House filer.
Input	MRN of already registered IE3FXX ENS Filing for the particular EO.
Prerequisites	- EO System is properly registered in UUM&DS; - Connectivity test scenarios of section 4.1 have been successfully completed; - Previous successful registration of IE3FXX ENS Filing, according to test scenario ICS2-CTS-EO-2.
Scenario Description	- EO System sends ENS consultation request (IE3Q05) for ENS Filing of known MRN or Master transport document or House transport document; - Verify that ENS consultation result (IE3R08) is successfully received by the EO System for ENS consultation request of step 1, and that EO System confirms the reception of the response.
Scenario Expected Results	- IE3R08 ENS consultation result is successfully received by the EO System; - The EO System acknowledged the reception of the ENS consultation result, by a correctly signed AS4 receipt message.
Integration Needs	- UUM&DS; - TAPAS

Table 31: Description of test scenario **ICS2-CTS-EO-25**

5 BUSINESS SCENARIOS

The provided business scenarios will be used during the development and maintenance of the system process test cases. Each business scenario concerns a specific business case, Air Cargo, Express or Postal; and covers different aspects and specific functionality of the system. The business scenarios and the derived test cases compliments the EO-CTSs of section 4, and may include in some instance additional steps for the completeness of the business scenario, not depicted in details in the table or within the provided excel sheet.

The steps from the end-to-end business scenarios are depicted in the sections below and linked to the relevant EO-CTSs. The steps must be executed in the exact sequence as depicted in each business scenario relevant table.

If a scenario cannot be completed due to a change in the message sequence for any of the business cases within it, then this scenario must be recreated and executed in its entirety. Successful scenarios without any changes do not require re-execution.

This chapter comprises five sub-sections with business scenarios applicable to the following different roles:

- 1) Postal Operators;
- 2) Express Operators;
- 3) Notify Party (for maritime and inland waterways, air);
- 4) Carriers (for rail, road, maritime and air carriers);
- 5) House Filers (for maritime and air house filers);
- 6) Person Notifying the Arrival (for maritime and inland waterways, air).

The matrix for the mapping of the test scenarios in the business scenarios is listed in the Excel file attached below:

CTS-Business
Scenarios.xlsx

5.1 Business scenarios for Postal Operators

5.1.1 Postal Business Scenario 1: Most common

This section depicts the End-to-end business scenario for the most common scenario for the Postal mode of transport for ICS2.

F43 is lodged and assessment complete notification is generated for each house consignment. F44 is lodged.

Postal Data flow
1_Most common _202

Postal EO			STI		EO-CTS
1	IE3F43	→			ICS2-CTS-EO-2: Register ENS Filing
		←	2	IE3R01	“
		←	3	IE3N03 ⁵	Receive notifications from STI

⁵ The number of the included house consignments in the ENS filings is not pre-defined and the EO can submit ENS filings with different number of house consignments (as per the ICS2 HTI Specifications). The respective number of Assessment complete messages will be generated. The dependencies

		←	6	IE3R01	“

Table 32: Postal Business Scenario 1: Most common

5.1.2 Postal Business Scenario 3: Postal with IMS involvement and ENS consultation

This section depicts the End-to-end business scenario for the Postal mode of transport. F44 and F43 are lodged. An assessment complete is generated for all the house consignments for which no RfS/RfI are requested. For one of the house consignments an RfI and an RfS are received and responded. Then an assessment complete is generated.

Table 33: Postal Business Scenario 3: Postal with IMS involvement and ENS consultation

5.2 Business Scenarios for Express Operators

5.2.1 Express Business Scenario 1: Express (F30 + F32) and Split consignment

This section depicts the End-to-end business scenario for the Express mode of transport for ICS2 where there is a Split consignment.

F32 is lodged and assessment complete message is generated for each house consignment. F30 is lodged by the Express operator containing the HCs from the F32. An assessment complete is generated. Arrival notification is sent by the Express operator through the STI.

An additional F30 with the same content with the first F30 with the Split consignment indicator is filed. An assessment complete is sent. Arrival notification is sent by the Express operator through STI.

Express Data flow
1_Express (F30 + F32)

Table 34: Express Business Scenario 1: Express (F30 + F32) and Split consignment

5.2.2 Express Business Scenario 2: Express (F31 + F32) and Re-entry

This section depicts the End-to-end business scenario for the Express mode of transport for F31 and F32 combination when there is re-entry.

F32 is lodged and assessment complete message is generated for each house consignment. F31 containing the master level contract details is received. The means of transport is diverted, and an arrival notification is sent for the second MS.

A new F31 is lodged with a re-entry indicator. The person filing, which hold an AEOS⁸, receives an AEO control notification. The means of transport re-enters the Customs union, the arrival notification is sent and a Control notification is received by the EO.

Express Data flow
2_Express (F31 + F32)

Express Operator			STI		EO-CTS
1	IE3F32	→			ICS2-CTS-EO-2: Register ENS Filing
		←	2	IE3R01	“
		←	3	IE3N03 ⁹	ICS2-CTS-EO-12: Receive Assessment Complete Notifications from STI
		←	4	IE3N03	”
5	IE3F31	→			ICS2-CTS-EO-2: Register ENS Filing
		←	6	IE3R01	“
		←	7	IE3N03	ICS2-CTS-EO-12: Receive Assessment Complete Notifications from STI
8	IE3N06	→			ICS2-CTS-EO-9: Notify arrival of the means of transport
		←	9	IE3R04	“
10	IE3F31	→			ICS2-CTS-EO-2: Register ENS Filing

Table 35: Express Business Scenario 2: Express (F31 + F32) and Re-entry

5.2.3 Express Business Scenario 3: Express (F21 + F32 + F33)

This section depicts the End-to-end business scenario for the Express business case where a Carrier submits the master level contract details.

The Express operator files an F32 and assessment complete message is generated for each house consignment. The Express operator lodges a F33 with additional House air waybill information. An assessment complete for the ENS is generated after the master level filing is lodged.

The *Carrier* messages, marked in light grey italics in the flow, will be simulated in order to send the IE3N03 required messages to the EO during the campaign.

¹⁰ The number of the included house consignments in the ENS filings is not pre-defined and the EO can submit ENS filings with different number of house consignments (as per the ICS2 HTI Specifications). The respective number of Assessment complete messages will be generated. The dependencies concerning the house consignments between the combinations of ENS filings, for example, F32 and F30, should be respected.

5.3 Business Scenario for Notify parties

5.3.1 Notify Party for Maritime and Inland Waterways Business Scenario F10

This section depicts the End-to-end business scenario for a Notify Party for Maritime and Inland Waterways when an F10 is submitted (simulated). Assessment complete is sent.

In a simulated flow, the Person notifying the arrival issues an Arrival Notification, which will include the details of the EO performing the tests as Notify Party for Maritime and Inland Waterways. The EO performing the self-conformance test verifies that for the Notify Party actor receives the notification. The decision to Control the HC is communicated to the Notify Party. Person notifying the arrival issues a second Arrival Notification with the same identifiers, to trigger the HC in incorrect state notification. Notify Party actor receives the HC in incorrect state notification.

The Carrier and the Person notifying the arrival messages, marked in light grey italics in the flow, will be simulated in order to send the IE3R04, IE3N08 and IE3N07 required messages to the EO during the campaign. The start of the scenario with these messages will be triggered by the EO during the registration of the campaign.

Table 38: Business Scenario F20 for Notify Parties for Air

5.4 Business Scenarios for Carriers

As not all types of filings are applicable for each Carrier, a carrier must select which types of ENS filing they intend to send: F10, F11, F12, F13, F20, F21, F27, F28, F29, F40, F41, F42, F45, F50, F51.

For each ENS filings selected, the table below defines the business cases that must be covered to test the complete functionality.

Business case / ENS Filing	F10	F11	F12	F13	F20	F21	F27	F28	F29	F40	F41	F42	F45	F50	F51
Most Common flow	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Do Not Load	X	X	X	X	X			X							
Referrals	X	X	X	X	X	X	X	X	X					X	X
Amendment and Invalidation	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
Controls and Arrival Notification	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
ENS Not Complete Notification			X	X		X									

Table 39: Carrier functionality

The functionality will be considered covered once all the business cases applicable per ENS Filing are performed.

As an example, if a carrier selects to support F21 and F42, s/he should perform the following business cases to cover the complete functionality:

- F21 – Most Common flow, Referrals, Amendment and Invalidation, Controls and Arrival Notification and ENS Not Complete Notification;
- F42 - Most Common flow, Amendment and Invalidation and Controls and Arrival Notification.

The *House filer* messages, present in some of the scenarios, will be simulated in order to send the required messages to the EO during the campaign.

5.5 Business Scenarios for House filers

As not all types of filings are applicable for each House filer, a house filer must select which types of ENS filing they intend to send: F14, F15, F16, F17, F22, F23+F25, F24, F26.

For each ENS filing, the following table defines the business cases that must be covered to test the complete functionality.

Business case / ENS Filing	F14	F15	F16	F17	F22	F23 + F25	F24	F26
Most Common flow	X	X	X	X	X	X	X	X
Do Not Load	X	X				X	X	X
Referrals	X	X	X	X	X	X	X	X
Amendment and Invalidation	X	X	X	X	X	X	X	X
AEO Control Notification					X			X
ENS Not Complete Notification					X			X
ENS Pending Notification	X	X	X	X	X			X

Table 40: House filers functionality

The functionality will be considered covered once all the business cases applicable per ENS Filing are performed.

As an example, if a house filer selects to support F22 and F24, s/he should perform the following business cases to cover the complete functionality:

- F22 – Most Common flow, Referrals, Amendment and Invalidation, AEO Control Notification, ENS Not Complete Notification and ENS Pending Notification;
- F24 - Most Common flow, Do Not Load, Referrals and Amendment and invalidation.

The *Carrier* messages, present in some of the flows, will be simulated in order to send the required messages to the EO during the campaign.

5.5.1 Maritime

5.5.1.1 House filer Business Scenarios F14

This section depicts the End-to-end business scenarios for a Carrier for ICS2 when sending an F14. The scenarios are described in the attached excel document, consisting of the *Most Common*, *Referrals*, *Do Not Load*, *Amendment and Invalidation* and *ENS Pending Notification* business cases.

5.5.2.3 House filer Business Scenarios F24

This section depicts the End-to-end business scenarios for a Carrier for ICS2 when sending an F24. The scenarios are described in the attached excel document, consisting of the *Most Common, Do Not Load, Referrals* and *Amendment and Invalidation* business cases.

5.5.2.4 House filer Business Scenarios F26

This section depicts the End-to-end business scenarios for a Carrier for ICS2 when sending an F26. The scenarios are described in the attached excel document, consisting of the *Most Common, Do Not Load, Referrals, Amendment and Invalidation, AEO Control Notification, ENS Not complete notification* and *ENS Pending Notification* business cases.

5.6 Business Scenario for Person Notifying the Arrival

5.6.1 Person Notifying the Arrival for Maritime and Inland Waterways Business Scenario F10

This section depicts the End-to-end business scenario for a Person Notifying the Arrival for Maritime and Inland Waterways when an F10 is submitted (simulated).

The Person Notifying the Arrival for Maritime and Inland Waterways sends an Arrival Notification for the means of transport. The decision to Control the HC is communicated to the Person Notifying the Arrival for Maritime and Inland Waterways. The *Person filing* messages, marked in grey italics in the flow, will be simulated in order to generate the MRN required for the EO messages sent during the campaign. The generated MRN is a pre-condition to fill the *Related MRN* in IE3N06 messages to be sent by the Person Notifying the Arrival for Maritime and Inland Waterways.
